Formatting buttons

The formatting buttons appear on the left, directly above the text editing area.

Icon	Name	Description	Affected Region
Top Row			
	Undo	Undo text changes. Pushing this button is equivalent to using the undo shortcut (<i>Ctrl-Z</i> under Windows).	Whole text
	Redo	Redo text changes. Pushing this button is equivalent to using the redo shortcut (<i>Ctrl-Y</i> under Windows).	Whole text
	Bold	Adds or removes bold text formatting (" ... ").	Selection, word under cursor, or cursor position
	Italic	Adds or removes <i>italic</i> text formatting (" <i>...</i> ").	Selection, word under cursor, or cursor position
	Underline	Adds or removes <u>underline</u> text formatting (" <u>...</u> ").	Selection, word under cursor, or cursor position
	Strikethrough	Adds or removes strikethrough text formatting (" ... ").	Selection, word under cursor, or cursor position
	No-wiki	Adds or removes nowiki text formatting (" <nowiki>...</nowiki> ").	Selection, word under cursor, or cursor position
	Superscript	Adds or removes ^{superscript} text formatting (" <sup>...</sup> ").	Selection, word under cursor, or cursor position
	Subscript	Adds or removes _{subscript} text formatting (" <sub>...</sub> ").	Selection, word under cursor, or cursor position
	Ref	Adds or removes an ^[1] in-text reference (no text selected: <ref></ref> ; text selected: <ref>. . .</ref>). Shift-click adds or removes a named in-text reference (no text selected: <ref name=""/> ; text selected: <ref name="">. . .</ref>).	Selection or cursor position
	Case	Toggles between <i>lowercase</i> , <i>Title Case</i> , and <i>ALL UPPERCASE</i> .	Selection or word under cursor
	Undo all	Restores the original version.	Whole text
	Redo all	Restore the latest version.	Whole text

Bottom Row

	Link	Adds or removes an internal wiki link ([...]).	Selection, word under cursor, or cursor position
	Web link	Adds or removes an external web link ([...]).	Selection, word under cursor, or cursor position
	Heading	Increases heading level(s). Adds =...= . No new headings are created for multi-line selections. Shift-click decreases the heading level.	Current or selected line(s)
	Bullet list	Converts item(s) to a bulleted list by adding a leading * . Shift-click removes leading * .	Current or selected line(s)
	Number list	Converts item(s) to a numbered list, adding a leading # . Shift-click removes leading # .	Current or selected line(s)
	Indent list	Convert item(s) to an indented list, adding a leading : . Shift-click removes leading : .	Current or selected line(s)
	Def list	Converts item(s) to a Definition list, adding a leading ; and a : after the first word.	Current or selected line(s)
	Image	Adds a wiki image. Inserts <code>[[Image:filename thumb width px ...]]</code> .	Word(s) under selection or cursor position
	Table	Adds a table. Selected lines are converted into table cells.	Selected line(s) or cursor position
	References	Adds or removes the references section placeholder (<references/>). Shift-click adds a Wikipedia References section header followed, on a separate line, by the placeholder (== References == / <references/>).	Cursor position
	Sort	Sort alphabetically. Sorting is case independent and numerically correct. It sorts by the finally displayed text, ignoring link targets, wiki-code, and non-word characters. When used on a single line, it sorts table cells or list items (separated by bullets, dots, dashes, the characters <code>\ / - , ; :</code> enclosed in spaces, the characters <code>, ; :</code> followed by spaces, or just spaces). It keeps the wikicode for template parameters, table rows, and lists. When used on multiple lines, it sorts whole lines and keeps the cells of a table row together.	Current line, selection in line, or lines under selection
	Redirect	Applies the redirect code (#REDIRECT [...]) to the selection or the words under the cursor. Adds the redirect code to the summary. Deletes all text.	Words under selection
